## HARD SKILLS

Unity

C#

Photon

VContainer

UniTask

PlayFab

Blender

Git

## LANGUAGES

Hungarian

Native

English

Proficient

## PROJECTS

### Reusable Unity Framework

First-person foundation with DI, scene loading and Steam integration.

Unity

C#

VContainer

UniTask

LeanTween

### Totally Witchin'

In Development

2D PvP multiplayer shooter-brawler with deterministic rollback netcode.

Unity

C#

ECS

Photon Quantum

PlayFab

## HOBBY & FREETIME

Fencing

(Sabre, 10+ years)

Distance Running

(1st marathon training)

Gaming

(League of Legends, RPGs)

## SUMMARY

Professional Unity developer since 2022 with experience across AR/VR, mobile and educational games, plus indie and hobby projects since 2017. Strongest in editor tooling, gameplay systems, and UI infrastructure - building reusable in-engine tools, custom editor extensions, and architecturally clean gameplay code.

## WORK EXPERIENCE

### MÓRA-BOOKR KIDS

2025 - 2026

Unity Developer (UI & Tools) - *Unity, C#*

- Implemented UI features, localisation, and custom UI components across the company's product lineup.
- Designed and built a **drag-and-drop graph editor** extension for the in-house content-creator app, enabling branching-story authoring.
- Built foundational UI infrastructure used across the product line: **BOOKR Tween** (in-house tweening system) and a **shader-based corner-rounding UI primitive**, both with inspector tooling.
- Designed and built a **reusable theming system** with per-product colour schemes and optional sub-modes (e.g. light/dark).

### MULTILEARN-PROSTEP CONSULTANCY

2024

Unity Developer (AR & Tools) - *Unity, C#, Blender*

- Built a custom **Unity Timeline extension** for animating complex parent-child hierarchies (a gap in Timeline's native capability), a separate TMP Text Timeline extension for text-transition handling, and content-creator-facing editor tooling around both, cutting per-animation creation time by **~60%** for the team.
- Investigated migration of the company's legacy AR app (printed-book marker tracking with 3D animated overlays) to a modern AR stack and **Unity Addressables**-based content delivery.

### VR STORM STUDIO

2022 - 2023

Unity Developer - *Unity, C#, JavaScript, Photon Fusion*

- Built the authoring workspace and **state synchronisation** for **Mentis.Live**, a team-built browser-based editor for OSH VR training content.
- Retrofitted **VoxSys** with **input abstraction**, weapon handling and rig swapping, enabling PC players to join existing VR sessions in this team-built shooter.
- For an AR virtual pet game, designed and built the behaviour stack, a **ScriptableObject state machine** integrated with Unity's animation system, with designer-facing **editor tooling**.
- Implemented gameplay UI across projects with **LeanTween**-animated elements and custom-built widgets.

## RELATED EXPERIENCE

### ESPORT1 *(rebranded to GOAT Entertainment)*

2024

Video Game Journalist - *League of Legends focus*

- Sole writer for League of Legends coverage at one of Hungary's leading gaming outlets: patch analysis, esports events (MSI 2024), and explainer pieces (laneswap meta, fan-rework concepts).

### LAWNMOWER GAMES *(volunteer indie team)*

2017 - 2018

Unity Programmer - *Unity, C#, Photon PUN 2*

- Sole programmer** for the team: built a mobile idle clicker game end-to-end and prototyped multiple multiplayer game concepts in **Photon PUN 2**.

## EDUCATION

### SZÉCHENYI ISTVÁN UNIVERSITY

2025 -

Faculty of Informatics and Electrical Engineering  
Computer Engineering Bsc - *in progress*

### EÖTVÖS LORÁND UNIVERSITY

2017 - 2018

Faculty of Informatics  
Computer Science Bsc - *did not complete*
